New resources developed by pharmacists at NHS North Yorkshire and York are now available.

MAR Chart Training Packages - £50 each

These packages are designed to be used as both a training resource and a competency assessment tool. They contain reading materials, worksheets for exercises and detailed answers including completed MAR Charts. The care home pack also contains extra resources about managing 'as required' medicines and template charts for recording creams & nutritional supplements and 'as required medicines'.

Medication Refresher Modules - £20 each

These modules are suitable as a refresher for staff who have already undertaken medication training. They are designed to cover specific topics that have been identified as areas causing problems in homes and domiciliary care and to help staff identify the most appropriate places to find reliable information about medicines.

Audit Tools - £30

The audit tools are intended to assist Care Home managers to ensure that medicines within their homes are stored safely, that appropriate documentation and records are kept and that all medicines can be accounted for.

The pack contains template audit forms that can be duplicated and an Audit Handbook to support staff in carrying out the audits. Completed audits should be filed to provide evidence for CQC of good practice.

All resources reflect current CQC requirements & Royal Pharmaceutical Society Guidance
